

In 1942, German intelligence officers rounded up skilled Jewish prisoners and launched Operation Bernhard, a clever scheme designed to counterfeit hundreds of millions of dollars worth of British Pounds and destroy the British economy by flooding it with counterfeit money. Located in the Sachsenhausen concentration camp, Operation Bernhard was, even by modern standards, a runaway success that resulted in the creation of forged bank notes worth 132 million British Pounds.

It is important to note that Operation Bernhard was an act of war, specifically pursued for the purpose of destroying Britain's economy by creating so much new money that the value of the money already in circulation would plummet. This was considered a strategic attack, just as effective as carpet-bombing tank factories or mowing down soldiers on the field with German-made MG42 machine guns.

What does all this have to do with the Federal Reserve?

Today, the Federal Reserve is engaged in an eerily similar operation, counterfeiting trillions of dollars in U.S. bank notes and flooding the U.S. money supply with money created from nothing. The result, of course, is the same as was intended by Operation Bernhard in 1942: The economic destruction of the target nation. Only this time, the target is the United States of America.
