

U.S. Food and Water Supply Poisoned by Perchlorate

Friday, 05 September 2008 19:16 -

According to a report by the Organic Consumers Association, a toxic chemical that is a byproduct of rocket fuel is rapidly poisoning the food and water supply in the United States. Known as perchlorate, this chemical has been found in 93% of the nation's milk and lettuce supply in a recent FDA study. It has also been found in the drinking water for at least 22 states at extremely alarming levels. Perhaps the scariest statistic is that perchlorate has been found in the breast milk of 97% of the mothers who were tested.
